What's so great about a cow?

One dairy cow can forever change the future for a family in need. A cow can produce up to 20 glasses of milk each day, instantly enhancing a child's diet. Cow manure can be used as precious fertilizer for nutrient-poor soil, drastically improving a farmer's crops. Cows easily adjust to weather conditions and are resistant to diseases. Best of all, a healthy cow can breed several calves in a lifetime allowing a family to create an income generating business that will sustain them month after month. Every cow recipient is trained in animal husbandry, and each cow has access to veterinary care - an all-inclusive package! When you raise enough money for one cow, four cows will be purchased through a matching grant from the Canadian International Development Agency.

\$500 buys four cows!
